Restriction application Model

A new model for the application of Water Restrictions has been drawn up in accordance with the guidelines contained in the Provincial Gazette Extraordinary No. 7811 of Monday, August 21, 2017. The model determines the monthly water consumption versus water availability and makes recommendations on which Phase of Restrictions are required.

It is recommended that where consumption is less than availability, the next level of restrictions be adopted by the council within a month and where the availability of water begins to improve over a three-month period, the restriction is relaxed.

The table below proves the table contained in the Proclamation.

Column 1	Column 2	Column 3	Column 4	Column 5
